

Your hardwood timber products supplier

A subsidiary company of Sweetman Renewables Ltd (SRL), Sweetman Renewable Timbers Pty Ltd (SRT) operates a hardwood sawmill and timber processing facility at Millfield in the NSW Hunter Valley.

SRT is able to offer a wide range of Australian hardwood timber products from a broad selection of species to wholesale, construction, building, infrastructure, mining and retail customers.

Legacy, sustainability, regional jobs and growth

Sweetman Renewable Timbers has been founded on the reputation and success of R.A. Sweetman and Sons. This company has been trading as Sweetman's Timber in the Hunter Valley of NSW for 100 years. Over that time the Sweetman family has been involved in the development of the region, particularly in sawmilling, agriculture and transport.

SRT now has the longest, continuous contractual log supply arrangement with the NSW Government. SRT has customers across Australia in heavy industrial development, and in a wide range of construction projects, plus commercial and residential building. The company has inherited a long, successful relationship supporting mining

operations in the Hunter Valley, and major infrastructure projects in Sydney and beyond.

SRT aims to improve the commercial performance of forest and timber industry in NSW, as well as making a notable contribution to the economy of the Hunter Valley. This will include expanding existing sawmilling operations to utilise additional log resources.

SRT strongly supports sustainable forest management practices and the maintenance of forest biodiversity. SRT is working towards additional economic development and employment opportunities as the Hunter Valley transitions its economy beyond a substantial reliance on thermal coal mining businesses.
